	WEILUN L SUPERVISORY PATEN	O IT EYAMINED	

Continuation Sheet (PTO-303)

Continuation of 11. does NOT place the application in condition for allowance because: The request for reconsideration and applicant arguments are not persuasive. The Examiner refers the applicant to page 15 (middle) of the final office action dated 09/14/2005 in which the examiner specifically mentioned that the entire reference is cited and specific mention of columns and figures is not limiting in any way. Second, the Examiner refers to page 16, Para 1 of the final office action where the examiner presented the following argument. Ishii teaches the user row of effects is a configurable row in which the user selects with an input device the effects from the effect patterns and drags and drops the effect in the slots 1-10 (See figure 33). Once the effect is anchored the system presents the user with the ability to further customize the effects. Further, Ishii teaches the user is allowed to specify the duration of the effect in which the user can select from a predetermined set of frames or the user can use the slide and quick select buttons to set any duration they desire which can be a continuous number of frames (see Ishii column 59, lines 5-67 and column 60 lines 26-67). Therefore, Ishii teaches a structure and function for allowing a user to create a first row "row 1" or line of effects (see 25a-f) and a second row "row two" (see 25n-1 -p), which is interpreted by the examiner as a plurality of lines. Further, the feature of setting effects to a given button would provide an obvious if not inherent capability for the invention of Ishii to allow a user to have one line of short term effects first row (configurable by the user) and continuous effects on the second row, or any combination thereof because the structure of Ishii teaches the ability to allow end user customization of the GUI button layout and applying customized effects to a particular button. The suggestion comes from column 59, lines 53-56 and 60-63 where Ishii teaches that the button effect values can be set to the user desires and can comprise two or more values for a button or buttons in tandem and can be moved by the user into any arrangement they desire.
